KIMIA MALEKIZADEH

Computer Engineer

Tehran, Iran | +98 910 827 0852 | Kimiyamalekizadeh@gmail.com | github.com/KimiaMalekizadeh

SUMMARY

Computer engineer with hands-on, project-driven experience across machine learning, NLP, and computer vision — from reimplementing deep-learning papers under real hardware constraints to building end-to-end clustering and classification pipelines with domain experts. Comfortable owning a project from raw, unlabeled data through modeling, evaluation, and a usable interface. Currently pursuing an M.Sc. in Data Science, with a research interest in anomaly detection in graphs.

SKILLS

Programming Languages: Python (Proficient), C# / .NET (Intermediate), C++ (Beginner)
Machine Learning & Data: PyTorch, scikit-learn, Pandas / NumPy, TF-IDF, Embeddings
Databases: SQL Server — advanced querying and database management
Web & Front-end: HTML, CSS
DevOps & Tools: Git, Docker (Beginner)
Business & Data Analysis: Power BI (Beginner), Excel, Bizagi
Design & Graphics: Adobe Photoshop, Adobe After Effects, Adobe XD
Languages: Persian (Native), English (Advanced — CAE certified)

WORK EXPERIENCE

R&D & Implementation Engineer (Remote, Project-Based) — Private Company *May 2026 – Present*

- Contributing to research, development, and implementation projects, owning deliverables end-to-end from initial research through implementation.

Backend Developer Intern (.NET) — DataNet *Feb 2026 – May 2026*

- Developed and integrated .NET-based backend services and server-side modules as part of a cross-functional product team.
- Collaborated closely with senior developers to design, implement, and test backend components supporting the product roadmap.

Website Support — Airline Agency *Feb 2025 – Apr 2025*

- Created and maintained website content, including articles and imagery, to support marketing and user engagement goals.
- Partnered with design and development teams to improve website usability and overall user interface.

PROJECTS

HiEUM — Unsupervised Moving Object Detection (Re-implementation) | *GitHub Project* | GitHub ↗

- Re-implemented the HiEUM framework (Xiao et al., IEEE TPAMI) for unsupervised moving-object detection in satellite video, validating core methodology under real hardware constraints.

CSTUserRank — Influential User Ranking in Social Networks | *University Course Project* | GitHub ↗

- Implemented CSTUserRank in Python, combining network centrality measures, VADER sentiment analysis, temporal weighting, and TOPSIS-based ranking to identify influential users in a social network dataset.

PLangRec — Programming Language Recognition (Paper Re-implementation) | *NLP Course Project · Jul 2026*

- Re-implemented the core idea of the PLangRec paper — detecting a source code line's programming language using a character-level deep learning model — at a smaller, feasible scale.
- Trained and compared multiple modeling approaches on the same feature set and built an interactive demo for live language prediction. (Team project)

Axillary Lymph Node Classification from Ultrasound Images | *Independent Research Project · 2026*

- Built an end-to-end ML pipeline classifying axillary lymph nodes from unlabeled ultrasound images, combining unsupervised clustering with radiologist labeling and supervised classification. (Team project)

News Topic Lifecycle Detection Pipeline | *Independent Module · Jul 2026*

- Built a standalone, incremental pipeline that detects and tracks the lifecycle of news topics over time, identifying new, evolving, and dead topics from daily news data.

EDUCATION

M.Sc. in Computer Engineering — Data Science *Since Oct 2025*
University of Science and Culture | GPA: 19.92/20 (through second semester)

B.Sc. in Computer Engineering — Software Engineering *Oct 2021 – Feb 2025*
Islamic Azad University, Central Tehran Branch | GPA: 18.01/20

PUBLICATIONS

- "Deep Learning for Natural Language Processing" — 10th International Conference on Knowledge and Technology in Mechanical, Electrical and Computer Engineering, Iran, Aug 2024.

CERTIFICATIONS

- Python — Kaggle (Nov 2025)
- Pandas — Kaggle (Nov 2025)
- Data Visualization — Kaggle (Nov 2025)
- Microsoft Power BI Essentials — FaraDars (Jan 2026)
- Python Programming Course — FaraDars
- CAE — Certificate in Advanced English (2019)
